

ABSTRACT OF THE DISCLOSURE

A rotating force transmitting apparatus includes:  
a first and a second transmitting devices for  
transmitting rotating forces to a first and a second  
5 rotary members, wherein the first and the second  
transmitting devices include a first and a second  
clutches for intermittently transmitting the rotating  
forces; a common driving device for imparting the  
rotating forces to the first and the second  
10 transmitting devices, wherein the second clutch can be  
switched from the turned-off state thereof to the  
turned-on state thereof for rotating the second rotary  
member when the first rotary member is rotating with  
the first clutch being turned on; and a permitting  
15 device for permitting the transmission of a rotating  
force only in a normal rotational direction of the  
driving device to the first transmitting device.
